

The COMBINATION HYBRID (Halogen Free)

Our entry level FUSION SERIES interconnect The COMBINATION HYBRID is a high quality coaxial audio cable, suitable for all RCA type audio connections.

With its design based on our successful The WELL HYBRID, in The COMBINATION HYBRID we have put the same advanced technology into use as applied in its already famed FUSION SERIES brother The INTEGRATION HYBRID, though with a lower price tag.

In The COMBINATION HYBRID, as its name implies, the finest of our cable technologies are combined:

- A stranded center conductor of our new developed highly advanced amorphous FUSION conductor material guarantees first rate musical transparency, imaging and resolution, free from grain or harshness.
- High quality low-loss dielectrics ensure low cable capacitance and excellent musical dynamics and timing.
- Multiple high quality shielding:
In a world that is increasingly polluted by electrical noise and interference of all kinds it is important to keep the audio signals transferred through your cables clean. The COMBINATION HYBRID contains not less than four dense shielding layers which vouch for a very high shielding factor and a low shield impedance, thus keeping the audio signal perfectly free from external noise and interference.
- Throughout use of Linear Structured Carbon[®]:
The cable shield and core are equipped with additional conduction layers containing our Linear Structured Carbon[®] material which further help to maintain maximal audio signal resolution.
- Excellent protection against mechanical and chemical environmental factors:
Silver coated stranded conductors and a rugged HULLIFLEX[®] 4 cable jacket stand surety for a very long cable lifespan and a long lasting performance without sound quality degradation.

All in all The COMBINATION HYBRID is a true audiophile performer which comes highly recommended for all your single-ended/unbalanced audio connections.

The COMBINATION HYBRID has a nice gold tone HULLIFLEX[®] 4 jacket and is standardly available stereo pair box packed with our gold plated high quality RCA (unbalanced) connectors type C - 8.4 in 0.6, 0.8, 1.0, 1.2 and 1.5 m. lengths.

Next to our standard sales units (see specifications below) The COMBINATION HYBRID is also available on 100 m. reels fitted with end-caps to prevent any entrance of chemically polluted air.

Shipping: 1 x 100 m. reel in a 310 x 310 x 290 mm. box with a total shipping weight of 9.85 kg.
